

**Cappress Junior CPJ-97**

Portable, Cost Effective and Makes volume Crimping Easy

The better alternative to hand crimping is our Cappress Junior Vial Crimper.

This manual bench-top vial crimper was designed to take the strain out of crimping 20mm seals. Completely mobile but with a sound stable base, Cappress Junior can be easily moved from one work-place to another. The design of the lever mechanism generates extra pressure with less effort, making crimping easier and therefore increasing production.

The vial crimper heads are easily interchangeable with different sizes as they simply screw in and out in seconds. Cappress Junior will take all sizes of crimping head up to 30mm including those for atomiser pumps and 20mm flip-top caps with that extra tag.

We have many years of experience in the design and manufacture of vial crimping tools. We only use the best quality materials; the crimping jaws are machined to precise limits and are then hardened and coated to give long life and smooth, trouble-free operation.

**Cappress Senior CPS-95**

A mobile but stable vial cap crimper, Reduced stress on operators, Easy crimping of large bottles

Our vial cap crimping press makes the capping of 32mm caps safe and practical. There is no requirement for electricity or compressed air.

Cappress Senior is a completely mobile vial cap crimper but is stable in operation. The lower lever is used to bring the unit down on to the bottle. Whilst held in this position the upper lever is then operated and the cap is crimped under the head of the bottle. The lever design is such that the pressures on operation are directed through the base of the press which keeps the press stable in operation. Due to the design of the levers, minimal pressure is required for the cap crimping operation. The jaws of Cappress Senior are interchangeable; they simply screw in and out in seconds.
