

**Cappress Senior Pneumatic  
CP-PN**

A new addition to our range of crimping equipment is our Semi Automatic Cappress

This unit only requires a supply of compressed air to operate.

We have designed this crimper to be easy to clean set and operate without the need to continually read complicated instruction manuals.

The crimping heads are interchangeable without the need for tools, they simply screw in and out by hand, and all sizes of cap can be catered for up to 32mm.

Different vials heights can easily be accommodated by adjustment of the top hand wheel, and the vial diameter is accommodated by adjusting a single hand wheel which moves both guides simultaneously ensuring they are always centred. The bench unit has dual operating buttons to keep the operators hands clear of the moving parts.

The upper crimping part can easily be fitted into an automatic track feeding system and requires a single air pipe to operate. A feeder system is currently under development. Materials used are stainless steel and anodised or plated aluminium. Bottle guides are made from Acetal. Crimp heads are hardened and plated steel or Stainless steel can also be specified.
