

# AP/CP2000

## Lightweight Air Crimper/Decapper

MANUFACTURERS INCREASE PRODUCTIVITY WITH  
FAST RELIABLE SEALING USING OUR AP/CP2000  
LIGHTWEIGHT CRIMPING AND DECAPPING TOOL

**Lightweight** - 0.7 kg with 20mm standard plain cap crimping head.

**Ease of use** - just set the pressure!

**Quiet** - in operation

**Ergonomic** - shape and balance

**Speed** - download our web site video

**Consistency** - evenly compressed seals

**Flexible** - different heads fitted in seconds

**Versatile** - many head sizes available

**Safety** - guarded trigger action for instant control and good co-ordination

**Tool exhaust** - used air flows back along the dual tubing

**Hardened and coated** - steel jaws for wear resistance and performance, also available in stainless steel.

LPL developed this tool to enable the crimping or decapping of vials and bottles to be undertaken in racks, trays or freestanding; "it's never been so easy!"

The tool is simple to operate and produces reliable crimps time after time with no complicated adjustments required. "Just set the air supply pressure on the regulator!"

Lightweight flexible dual tubing between the tool and a regulator carries the air from your compressed air supply and then transports the exhaust air away from the table or cabinet. Unlike many other tools, the AP/CP2000 only recognises the pressure it is applying to the seal thereby overcoming the tolerance variation of glass vials and virtually eliminating faulty seals. The quickest way to crimp or decap most vials is in trays or racks. See the video at [www.aircrimper.com](http://www.aircrimper.com).

The air supply is conveniently adjustable for different size heads via a pressure regulator and gauge supplied with the tool. The tool also has a guarded trigger that enables fingertip control and prevents accidental operation. Once the pressure is set, vials or bottles will be uniformly crimped.

For speed, ease of use and consistent crimping, the AP/CP2000 Airtool is the perfect solution.

Protected by international patents and patents pending.

**Quick Release Airtool Holder**

If you have applications that require the tool to be bench mounted, we can supply you with the above holder.
